

biosense

Health data that makes sense.

The Problem

1.1B wearable owners

Confronted with raw data & jargon

No clear insights / actionable steps

Translate smart device health data into personalized, conversational guidance that helps wearable owners understand and improve their wellness without complexity or jargon.

Business Details

Market Description

Our Customer

Tech-Savvy Professionals (25-45)

Urban corporate workers with demanding careers

AI personalization: Adapts explanations

Time savings: Get actionable insights in 30 seconds

Market Size & Growth

Market	2024	2030	CAGR
Conversational AI for Health	US\$200-400M	US\$2-3B	>25%

Depth Opportunity: capturing 1-2% of the market would bring up to \$3M ARR

Opportunities

Data Interpretation Problem

1.1B wearable owners confused by raw data

AI Personality Adaptation

No more one-size-fits-all advice

B2B2C Distribution Model

Healthcare provider/
Corporate wellness bundles

Industry Analysis

Main Competitors

Competitor Group

Premium Wearables
(Oura, Ultrahuman, Whoop)

Native Platform Health Apps
(Apple, Samsung)

Conversational AI
(OpenAI, Google, Anthropic)

Advantages

Medical grade accuracy
based on years of research.

Zero-cost distribution as the
apps come pre-installed.

General knowledge base for
any question.

Disadvantages

Expensive, hardware lock-in:
Requires €300-400 upfront, then
€30/month

Zero to little AI interpretation:
Display raw data without
explaining meaning

No wearable integration: AI lacks
the needed context for meaningful
advice

Health-Tech Trends

AI Personalization

Standard by 2026

Gamification & Community

Increased retention

Data Privacy & Compliance

Increased trust

Competitive Advantages

Product

Persistent memory AI,
Preventive screening via ML.

Distribution

Healthcare provider/
Corporate wellness bundles.

Retention

Community & Events,
Deep AI relationship.

Value Proposition

Product Benefits

Proactive Monitoring

24/7 pattern screening

So that users feel:
... **Reassured**

Conversational Intelligence

Clear insights

So that users feel:
... **Supported**

Data-Backed Decisions

Aligned to your needs

So that users feel:
... **Empowered**

Customer Needs

Emotional Needs

Always available

Knows everything about you

Fear-Based Needs

Judgement-free

24/7 preventive monitoring

Functional Needs

Personal Advisor

Jargon-free language

Against substitutes

vs. **Native Platforms**

Proactive advice,
Tailored to your
lifestyle

vs. **Premium Wearable**

Affordable &
working with
any/all devices

vs. **Conversational AI**

Health data
integration,
Persistent memory

Business Model

Key Activities, Partners & Resources

Health Platform Integration

So we work with:

Apple, Samsung,
Google SDKs

Cost: ~\$125/yr

Application & AI Development

So we work with:

OpenAI enterprise
licensing

**Cost: ~\$1500/mth
+ profit-sharing**

Growth & Partnerships

So we work with:

Forma, Regina Maria,
Influencers, Gyms

**Cost: ~\$3500/mth
+ profit-sharing**

Distribution Channels & Monetization

Direct B2C Channels

Social Media,
Newsletter, ASO

Subscriptions
(€9.99/month)

**Month 1-6:
€2,500-7,500**

B2B2C Channels

Healthcare provider/
corporate bundles

Revenue share on
app subscriptions

**Month 1-6:
€0-7,000**

Affiliate Channels

Online forums, UGC,
Local Partnerships

10-15% commission
on subscriptions

**Month 1-6:
€0-2,000**

6-Month Financial Projections

- **Total Investment:** €30,050
- **Total Revenue:** €32,500
- **Break-Even Target:** Month 6 (2,800–3,300 paying users across all channels)
- **Monthly Recurring Revenue (MRR) by Month 6:** €16,500–19,500
- **Customer Acquisition Cost:** €10–12 (blended across channels)
- **Lifetime Value (12-month avg):** €120–150 per user

The AI Approach

LLM Health Advisor

7-day health data in TOON format

Self-improving open context

Proprietary system prompt

User prompt

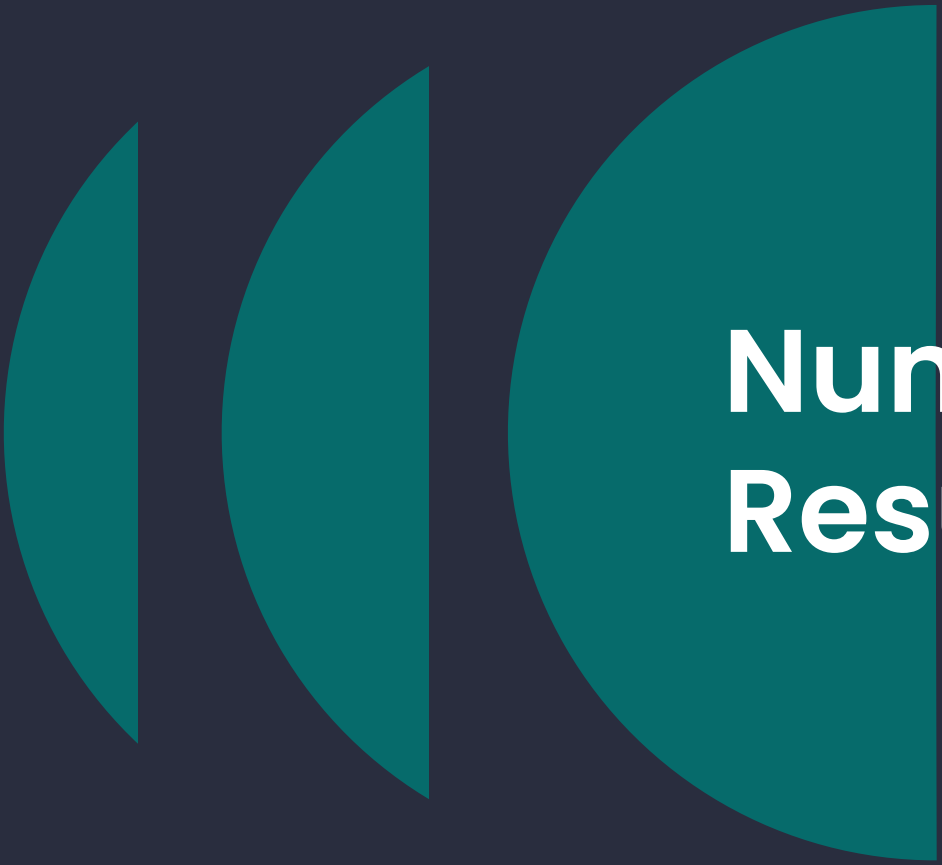

ML Preventive Screening

Anonymous Heart-Rate Variability (HRV) timeseries

Checked every 15 minutes

User Alerts

Numerical Results

Live Demo

Meet the team

Bogdan Chiș
MIRPR

Conducted literature review and experimentation, designed the learning pipeline, trained and evaluated the smart monitoring model, delivered as a system ready to be integrated into the application.

Antonio Hus
PPI

Team Lead - responsible of project strategy and business.

Developed the LLM integration infrastructure and the AI companion chatbot.

Ariana Ilieș
PPI

Introduced the Smart Anomaly Detection, a fully customizable AI-driven system that identifies unusual patterns in user data such as missed step targets or sleep changes and triggers proactive notifications.

Eduard Jităreanu
PPI

Responsible for mobile application user interface design & development. Developed key UI screens & implemented the gamification system with daily challenges, progress tracking, and streak mechanics.

Robert Leliuc
PPI

Integrated the health platform SDKs (Health Connect) to use real user health data.

Also integrated the ML model into the application.
